(LISTED BELOW)PLACE ACQUIRED 25X1X SUPPLEMENT TO  
REPORT NO

DATE OF INFO.

--	--

1. According to statements of employees of the Mnisek (N50/ 166) iron ore mines whose mines were opened because of a shortage of ore in the mines at Mnisek (N50/ 167). The daily output of the Mnisek mines is 108 to 195 tons of ore containing 32 to 50% iron.
2. All the ore, which is from six-story shafts about 206 meters deep, is transported through a 1,300 meter-long tunnel that opens onto the Prague-Lobris road at the 27.2 milestone. An administrative building, an engine room, a boiler house, and a washroom and showers are located at the mouth of the tunnel. Sixteen dwelling units for miners were built in the vicinity out of a total of 35 dwelling units which were planned for the year 1953. The construction of the restitory shop was started.
3. There are approximately 240 employees, of whom about 230 are miners, 10 are technical workers, two are administrative workers and three are guards. Since miners were expected to arrive from Muncice, Ing (Ing) Polak is the manager; it is probable that Ing Karel Kocourek from the former general management of the iron ore mines at Mnisek will take his place. (Ing) Slobon, a Slovak, is the security official and an ardent Communist.
4. Miners work in three shifts. Production is 45 carts with 800 to 1,000 kilograms each per shift. The working morale is low. Employees working in the tunnel receive 13,000 Kcs monthly, those in shafts 6,000 Kcs, and those on the surface 4,000 Kcs to 4,500 Kcs monthly.
